

About Us

Robert Kline Construction is a full service concrete and framing contractor with over 30 years experience.

We focus on establishing long term relationships with our clients and work hard to produce quality work at a competitive price.

We realize that if we serve our clients in such a way that makes their job go smoothly and helps to get their job off on the right foot that we have a win-win project. Therefore we focus on working closely with grading contractors, soils engineers, structural engineers, and project managers to make sure the job moves smoothly with a minimum of delays and errors.

We take seriously the disposal of concrete waste and other potential contaminants to protect our environment.

How can we serve your business?

Testimonials

Based on my experience, Robert Kline Construction (RKC) embodies integrity, commitment to quality and growth, solid work ethic and effective communication, I would recommend RKC without reservation. – Dave Schroeder, Nordby Signature Homes

We have used Kline Construction for both framing and concrete services for many years. Kline Construction is always prompt and professional on the bidding procedures and construction services. We are able to proceed with our projects in a timely manor with minimal supervision of there construction staff. Our projects are very complicated and detailed, our expectations are very strict and Kline Construction continues to give us the service we need. We look forward to a long and lasting relationship. – Marshall White, President, Marshall White Construction Inc.

Kline Construction has completed multiple complex foundations and some large concrete slab projects as well as framing for Boden Construction Inc. The crew are all very hard working, friendly and show up on time. Kline Construction stands behind their work. They have been an asset as a sub-contractor.” – Jim Boden, President, Boden Construction Inc.

Concrete Service

We at Kline Construction are your retaining wall and foundation experts. Today's foundations are highly technical requiring skilled people working closely with engineers, special inspectors and framing contractors to insure a structurally correct product to start your project off right.

With over 30 years experience we are familiar with all technical aspects of foundation work and mix designs of concrete to be able to handle most weather, soil and site conditions in the bay area.

We have built numerous difficult and complicated walls and foundations. From a site wall to a twenty foot or higher structural wall, we are your people to make sure it is done right. We have the experience and personnel to provide a timely and accurate job. The world of engineering has skyrocketed in the past twenty years and we have made it a top priority to maintain our ability to achieve the demands placed on builders.

Robert Kline Construction, Inc.

is your go to company for all of your concrete and framing needs. We look forward to serving you.

ARCHITECTURAL & COLOR

Whether it be a garage slab, structural slab for commercial forklift traffic, or architectural concrete such as driveways, patios, porches and pool decks we have the experience and know how to produce a lasting product.

We work with owners or landscape designers, structural and soil engineers to design concrete mixes, colors, and finishes to produce a slab that is pleasing and built to last. Cracking which is inevitable, is controlled by low water to cement ratios, proper reinforcing, base preparation, and well thought out joint patterns.

Understanding soil conditions and types as well as insisting on proper sub grade preparation is essential to producing good results.

We also have a framing division which helps to make the transition from foundation to framing go smoothly

We specialize in high end residential and light commercial projects.

Framing Services

Custom building is a vast and amazing arena. Creating a custom home that is well built is our passion. For over thirty years we have been making peoples' dreams a reality. There is not a project that is beyond our ability to achieve.

From value engineering to close client/architect relations, we will assist you in building a home that you will be proud to put your name on.

At Kline Construction we have taken every effort to ensure that we install doors and windows to the highest level of accuracy and water tightness. We have worked with the highest standards of water intrusion testing and have what it takes to make sure that the windows we install will not leak.

Just as in concrete, the structural engineering of framed buildings has reached a level of intensity that requires knowledgeable and skilled people. We take pride in ensuring that every building we construct is at or above engineering specifications and standards.
